"DOESN'T YOUR LAWN DESERVE THE ROYAL TREATMENT?"

PEST

SOLUTIONS, LLC

"If you have a pest problem, we have the Remedy"

MONTHLY TECH NOTES APRIL 2023

This month's application will be a full micronutrient fertilizer with an iron micronutrient package. A contact systemic combination insecticide and herbicide for weeds and sedge. A pre-emergent herbicide will be included to help limit the number of weeds emerging above ground.

April may or may not bring showers... So it is imperative to run your sprinkler on a weekly basis. Rain once a month will not provide adequate hydration to your lawn. An inch of water is required twice per week to achieve this. We are seeing stressed and damaged lawns due to the fact this is not being performed and the lawns are not getting enough water. Twice a week 50-60 minutes per zone will be needed due to the temperatures occurring this month

With hot or dry weather, our southern turf grasses can be damaged by drought, hot spots, insects and fungus. The amount of time our southern turf grasses (St Augustine, Zoysia, Bermuda and Centipede) will need to recover is hard to determine. In the active growing months, southern grasses will only spread 15" to 32" per year. If your lawn experiences any loss due to old damage, with time, it will recover. In areas of loss that are 12" or larger, the use of grass plugs is recommended. Our program is designed to aid in recovery from turf damage. The time of recovery will depend on the amount of damaged area that has occurred. Some lawns are damaged heavier than other lawns, even in the same neighborhoods. We suggest top dressing with the use of sand/dirt in these areas.

Remember Royal Green has the Remedy for all of your lawn care, tree/shrub, pest control and termite needs. Contact Phil with Remedy Pest Solutions directly at 904-743-2403 for any of your pest control and termite needs. Use the coupons below for specials on these services.
