

LAWN & ORNAMENTAL SERVICES, INC.

"DOESN'T YOUR LAWN DESERVE THE ROYAL TREATMENT?"

SOLUTIONS, LLC

*"If you have a pest problem, we have the **Remedy**"*

MONTHLY TECHNICIAN NOTES

This is a summary of our monthly application and some special offers with our sister company Remedy Pest Solutions. Remember to check your email or mail for your specific inspection report and invoice following your service. New customers will receive a welcome letter providing additional information.

Some areas have had some significant rain 2-4 inches per week, however, others have not. If you are not getting 2-4 inches per week make sure you are still watering enough, especially in full sun areas. As temperatures start to cool down you maybe able to reduce the watering. Not all irrigation systems are the same. If you notice brown areas you can put out an empty tuna can or cat food can to measure that area to see how much water you are actually getting in that area. If not enough you may need to add a water hose there to make up the difference. **Only rain provides 100% of coverage not irrigation systems.**

This application will include slow release nitrogen, potassium, and micronutrients with sulfur. Insecticide for turf damaging insects as well as herbicides for sedge grass control now that the temperatures have come down. If any fungus is noted at time of service it will be treated. Please try to water the application in within 24-48 hours. If the lawn develops a fungus after we have been there and we have to return to apply a fungicide separate there is an extra charge for this. There is nothing that is applied that can prevent fungus this is caused by environmental conditions out of our control Please remember that even when we treat for fungus (brown spots) it can appear even days to weeks after treatment.

It is important you are mowing at the correct heights for your type of turf, for St. Augustine lawns, the blades should never be lower than 3.5 —4 inches of total length left after mowing, Bermuda lawns 1.5" to 2.5" , and Zoy-sia 2—3 inches. Do not scalp your lawn at this time of year. If you have any exposed runners/roots, please apply top soil to cover and protect them from the elements. This will aid in the recovery process. If you have larger areas you will need to put in plugs, seed, or sod depending on how large they are, no Bahia.

As always, Remember Royal Green has the **Remedy** for all of your lawn care, tree/shrub, pest control and termite needs. We also can do WDO Inspections/Reports for your Real Estate needs. Contact Phil with **Remedy Pest Solutions** at 904-743-2403.
