

LAWN & ORNAMENTAL SERVICES, INC.

"DOESN'T YOUR LAWN DESERVE THE ROYAL TREATMENT?"

SOLUTIONS, LLC

"If you have a pest problem, we have the *Remedy*"

MONTHLY TECH NOTES

This is a summary of our monthly applications and offers. You receive your invoice and inspection report in your email or by mail after your service has been done. You need to make sure you are getting at least 2" of rain or water a week at this time of year. Also important to start watering early in the morning not at night as this can help promote fungus as we get more cooler nights and cool damp morning. Not all irrigation systems are the same. If you notice brown areas you can put out an empty tuna can or cat food can to measure that area to see how much water you are actually getting in that area. If not, you may need to add a water hose there to make up the difference. **Only rain provides 100% of coverage not irrigation systems.** With the evening temperatures coming down and days getting shorter you can cut back to watering at least once per week if you are getting 2" of rain.

This month we will be applying a combination of slow release nitrogen & potassium acetate with micronutrients, insecticide for any turf damaging insects, and herbicides for weeds and sedge control. As always you must water in your application to get the full benefit of our applications. We will be treating for any active fungus at time of service. If we have to return there is an extra charge for a fungicide treatments, minimum \$45/application. Please remember that even when we treat for fungus (brown spots) it can appear even days to weeks after treatment. It will take weeks to months to recover because the lawn is not growing as fast now. This is why there is an extra charge to come back and retreat for active fungus. No materials will prevent you from getting fungus it is due to the weather conditions.

It is also important you are mowing at the correct heights for your type of turf, for St. Augustine lawns, the blades should never be lower than 3 1/2—4 inches of total length left after mowing, Bermuda lawns 1.5" to 2.5" , and Zoysia 2—3 inches. Do not scalp your lawn at this time this stresses the lawn as well as any weak areas. If you have any exposed runners/roots, please apply top soil or sand to cover and protect them from the elements. This will aid in the recovery process. If you have larger areas you will need to put in plugs, seed, or sod depending on how large they are, no Bahia.

As always, Remember Royal Green has the **Remedy** for all of your lawn care, tree/shrub, rodent, pest control and termite needs. We also can do WDO Inspections/Reports for your Real Estate needs. Contact Phil with **Remedy Pest Solutions** at 904-743-2403.
