SOLUTIONS, LLC
*"If you have a pest problem, we have the **Remedy**"*

CONGRATULATIONS TO ROYAL GREEN CELEBRATING 20 YEARS 2006-2026

This is just a summary of our monthly application. Remember to check your email or mail for your specific inspection report and invoice following your service. New customers should receive a welcome letter with additional information.

Even though we have had some rainfall you need to monitor what you are actually getting. If you are not getting 1-3 inches per week of rain you still need to make sure you are watering. Not all irrigation systems are the same so the amount of time you need to water maybe different than someone else. REMEMBER WE LOOSE 1/4 TO 1/3 OF MOISTURE PER DAY. The longer you water, the better. The shorter you water the worse it is for your lawn. It is not the same to water 10-15 minutes per day as it is to water 45-60 minutes 2 times per week. Your grass will not grow and look the way you want it if you don't water. Just like we have to have water to live so does your landscape. If you notice brown areas you can put out an empty tuna can or cat food can to measure that area to see how much water you are actually getting in that area. If turf is crunchy, or leaf blades are folding like a pencil, or your footprint is left behind when you walk on it, this is evident of a dry area/hot spot. You may need to add a water hose there to make up the difference. Only rain provides 100% of coverage not irrigation systems.

This application includes a slow release nitrogen, potassium, and micronutrient package. Insecticide for all turf damaging insects with a residual to help with the control of sod web worms, chinch bugs, and other turf damaging insects. We will be using limited weed control due to the temperatures and label restrictions. Unfortunately there is no insecticide that prevents flying insects from getting into the lawn. **As always please remember you need to water your application in to get the full benefits of the materials.**

Unfortunately, we went from cold/frost damage to drought and hotspots. To help with recovery please make sure you are mowing weekly, and watering properly to help the grass to grow and grow out the injured areas. If you have bare areas, top soil can be added to help prevent further damage now due to the heat. If you have larger areas you may need to put in some plugs, seed, or sod depending on the size of the area. NO BAHIA. It is also important you are mowing at the proper height for your turf grass. St. Augustine 3.5-4 inches, Zosia 2-3 inches, Bermuda 1.5 to 2.5 inches. **Do not apply any additional products to your lawn. The applications are designed to strengthen the root system and improve growth when it starts to get warmer and help with recovery. You still have to be patient at this time.**

Remember Royal Green has the **Remedy** for all of your lawn care, tree/shrub, rodent, pest control and termite needs. We also can do WDO Inspections/Reports for your Real Estate needs. Contact Phil with **Remedy Pest Solutions** at 904-743-2403.
